

YOUR PRE-PURCHASE CHECK LIST

Prior to placing an order, please do the following checks.

Windsor baths can be fitted into existing showers, bath areas, laundries etc where hot and cold water supply and floor drainage is available.

Check that;

[1] There is clear access for the bath into you home from your street?

- Are your doors and hallways 73.6 cm [29"] or wider to allow access [the bath is 71cm/28" wide]

[2] Do you have a floor area of 71 cm [28"] X 121 cm [48"] of space in the area you want the bath to go into?

- Is there a floor drain under or near this area [a flexible drain pipe is included to access your existing drain]
- Are hot & cold taps or pipes in this area
- Will the height of 104 cm [41"] interfere with any existing taps, towel rails, soap dishes etc.

[3] WINDSOR baths are available in LEFT or RIGHT hand door models. e.g. a right hand door model has the door on the right side of the person SITTING in the bath. The photographs above are of a RIGHT hand door model. With a door on the opposite side it would be a LEFT hand door model.

Having a choice of left or right hand doors allows you to place the bath into any existing shower or corner with the taps near to the existing plumbing.

Make sure your door choice leaves clear access for the user to get in and out of the bath comfortably, without being too close to an existing basin, toilet etc.

Full installation instructions are included with the bath. It can be fully plumbed in like a normal bath or attached to existing shower taps similar to a washing machine [assuming a suitable location]

[4] SPA OPTION ONLY - needs **waterproof** GPO on corner wall with safety switch; unit uses 1000W; 300mm from floor and 300mm from corner on the edge of bath opposite the opening door. A 3 pin plug on the bath connects to this. Where possible run cable to bath in concealed location e.g. in wall cavity, through wall etc. **TO BE DONE BY AN ELECTRICIAN**
